

Digital application

COMEN • Share with the World.

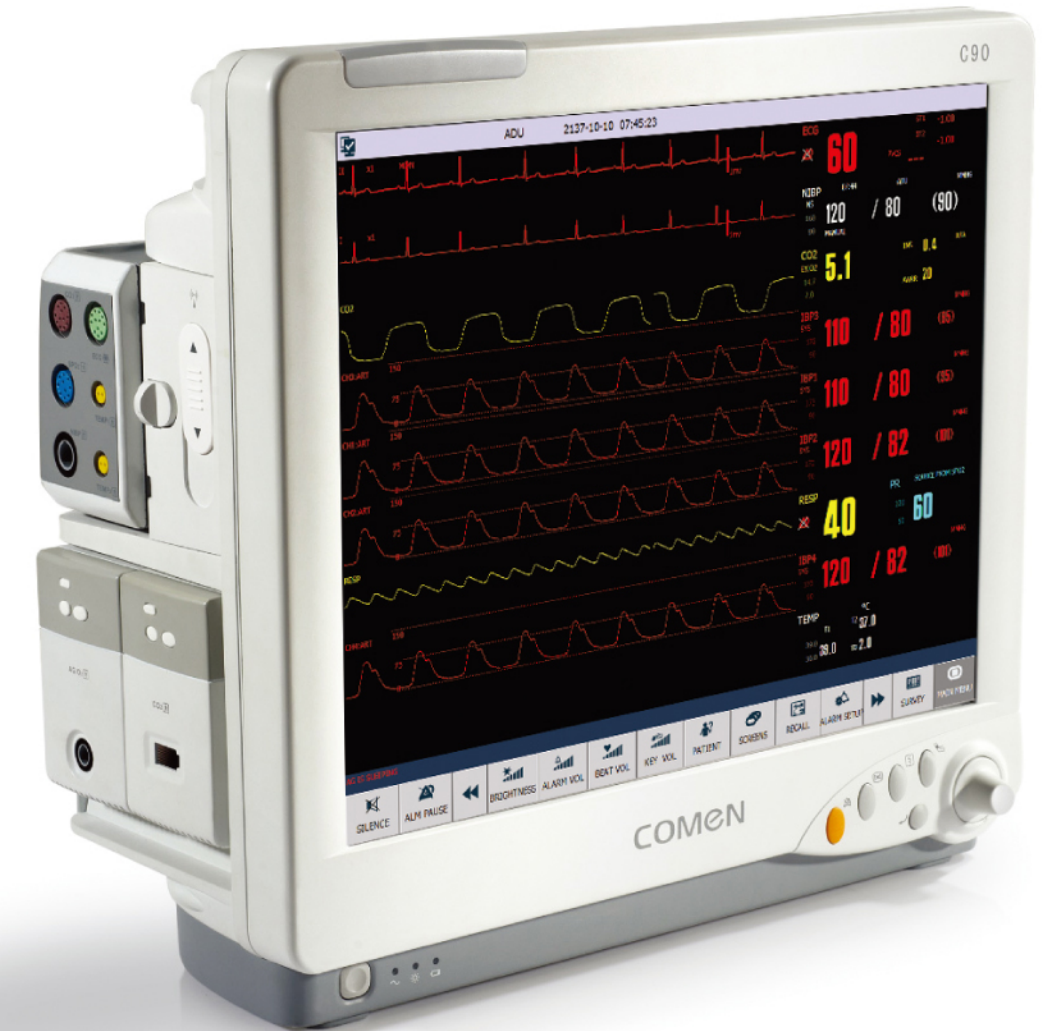

Digital ICU

- Built-in ICU EMR
- Powerful clinical information integration
- Perfect physiological system (Including Apache II and Apache III)
- To realize multi-platform working of various kinds of medical information (Such as PACS image invoking)

Digital OR
life information
solution

- Built-in electronic record system for anesthesia department/operating room
- Comprehensive clinical equipment information (Connected to operating equipment such as anesthesia machine and infusion pump, etc)
- Automatic acquisition of physiological indications and important events during perioperative period
- Convenient input mode

C90 Modular Monitor – Touch Screen

C90 monitor is integrated with the world-leading life parameter monitoring technology and IT application to make a high-end patient monitoring platform and provide comprehensive monitoring solution.

External Design

The world leading technology and high-level materials and advanced manufacturing process ensure that C90 monitor provides a high-end patient monitoring platform

- 17 inch high resolution LCD touch screen 1280 X 1024
- touch-screen and optical knob dual operation & dual assurance
- SD socket: to expand memory capacity
- multiple USB interfaces can support keyboard, mouse and USB for data transfer as well as software upgrade.
- various ports for external devices : auxiliary plug-in box, monitor, CIS and cable network interface and so on
- handle space saving: built-in handle for which is ease to carry around
- 360° visual alarm lamp: three-color alarm lamp for quick attention, and make clear for physiological alarm and technical alarm
- built-in lithium battery: to ensure keeping continuity of patient's data during operation with a backup of over 4 hours
- Wall mount & trolley mount option
- supporting built-in thermal printer and external laser printer
- Infrared transmission for parameter module

High quality

Built- in handle
